Senior Data Analyst & Data Engineer (Microsoft Certified Data Engineer & Analytics Engineer Associate) who turns messy financial and sales data into reliable decision systems. I design and ship SQL/Fabric/Power BI solutions that reduce refresh times, cut capacity costs, and standardize governance across IT, Finance, Sales, Logistics, Accounting, and Tax. My focus: measurable impact, clean architectures, and pragmatic best practices.

Signature Outcomes

- Standardized BI governance (PBIP reports + Azure DevOps (Git Integration) + Deployment Pipelines Dev/Test/Prod), lead time to release cut from 72h to ~30h (~60%) the end-to-end process
- Migrated 80+ reports hands-on and led ~150 more from Tableau/Excel/PPT to Power BI, Replaced manual ETL process and PDF distribution and post-update incidents down ~90%
- Built a reliable Microsoft Fabric data warehouse for Finance/Sales/Ops/Marketing, replacing unstable SSIS jobs, cut ingestion from 3 hours to 1 hour (~67%) and made other pipelines ~50% faster; reduced Fabric compute/capacity usage by ~50% implementing incremental loads, added pre/post-load data checks and monitoring to prevent missed loads.

Experience

NowOptics – SQL & BI Developer Lead (Apr 2025 – Present)

Build and optimize semantic models and SQL workloads in Fabric/Power BI focused on reliability and lean refresh cycles. Drive cost-aware designs and clean handoffs for business users.

Selected impact

- Delivered ~30 Tableau-to-Power BI migrations plus new dashboards with 5-20 min refresh, reducing manual work and stabilizing day-to-day delivery for 350+ users.
- Implemented Git integration (with Azure DevOps and deployment pipelines) for Power BI (PBIP) to streamline report development, enable safe rollbacks, and keep Dev/Test/Prod workspaces organized and auditable.
- Partnered with Finance/Sales/Marketing/Ops to standardize KPIs and definitions, reducing daily decision latency and preventing conflicting “versions of truth.”
- Monitored and optimized Microsoft Fabric capacity consumption; identified bottlenecks and tuned refresh (partitioning, concurrency, scheduling, query optimization), reducing throttling incidents by ~50% while meeting daily SLAs. Enforced workspace governance standards (Dev/Test/Prod separation, RBAC least-privilege, naming, certified datasets and the implementation of best practices in development).

Toolbox: SQL Server/T-SQL, Power BI (DAX/M language), Microsoft Fabric (Lakehouse/Warehouse, Data Factory Pipelines, PySpark/Python Notebooks), Azure DevOps (Git integration).

Holding Group Echamorro Monisa (Jun 2021 – Mar 2025)

Subsidiaries: Echamorro Industrial S.A., Droguería Rocha S.A., Farmacity S.A., WAPI Industrial S.A., among others.

Senior Data Analyst (IT Department) (Jan 2023 – Mar 2025)

Led BI modernization across the group, moving from fragmented reporting to governed analytics by implementing a Microsoft Fabric data warehouse and leading the Tableau-to-Power BI migration.

Selected impact

- Led the Tableau → Power BI migration (~50 reports / 60 users), improving accessibility and reducing maintenance.
- Built the Microsoft Fabric lakehouse/warehouse from scratch, migrating an unstable SSIS-based DWH; reduced long-running loads from over 2 hours to ~1 hour via incremental loading patterns, partitioning, and query tuning, with pre/post-load validations and monitoring to prevent missed loads.
- Standardized KPIs and automated refresh/delivery; month-end close now 2.5 days (was 5, 50% faster) and daily reports ship automatically instead of failing or being sent by hand.
- Administered the Azure/Entra ID tenant for BI: created security groups, provisioned users, and managed M365/Power BI Pro/PPU/Fabric licenses; managed Power BI workspaces and capacity assignments (roles, access reviews, ownership/naming standards), keeping environments audit-ready and reducing access issues.

Toolbox: Microsoft Fabric (Data Factory, Lakehouse, Warehouse), Azure Portal, Power BI (DAX, Tabular Editor, Power Query), SQL Server/SSIS/SSRS, Excel/Power Pivot.

Accounting Assistant & Financial Analyst (Jun 2021 – Dec 2022)

In this role, I was responsible for supporting the accounting and financial management of the group, leading key tasks in report preparation, reconciliations, and financial analysis to assist strategic decision-making.

Selected impact

- Built Excel templates for withholding tax, fiscal credit, and income/ISC that automated data cleaning and validations; prepared and filed returns in Nicaragua's tax system (VET), reducing tax-prep time by ~1.5 days per cycle.
- Recorded expenses, amortizations, and other financial transactions to ensure accurate and up-to-date accounting records.
- Standardized and automated finance workflows (bank and AR/AP reconciliations; OPEX variance and budget-to-actuals for expenses/costs; financial statement comparatives and cash-flow variance analysis; payroll postings/analysis), replacing manual steps and cutting the month-end close by about 2 days.

Technical Skills:

- English: Advanced (C1)
- Power BI: Advanced (Microsoft Certified)
- Microsoft Fabric: Advanced (Microsoft Certified)
- SQL Server, MySQL: Advanced

- Excel, Power Query, and Power Pivot: Advanced
- SSRS & SSIS: Intermediate
- Python & PySpark for Data Engineering: Intermediate
- HTML, CSS, and JavaScript: Intermediate
- Git and GitHub/Azure DevOps: Intermediate
- R for Statistical Analysis: Basic
- Proficient in ERP Softland
- Application Development with Power Apps
- Process Automation with Power Automate
- Azure/Office Management: Intermediate

Soft Skills:

- Leadership: Ability to motivate and guide teams toward achieving common goals.
- Effective Communication: Excellent skills in conveying ideas and results clearly and concisely.
- Teaching and Mentorship: Passion for teaching and mentoring colleagues, helping them develop their skills and reach their full potential.
- Teamwork: Strong ability to foster collaboration and cohesion within teams to create a productive work environment.
- Problem-Solving: Skilled at identifying and resolving issues efficiently and effectively.
- Adaptability: Quick to adjust to new challenges and work environments.

Technical and University Education:

- 2019 – 2021: Technical High School Diploma in Accounting
- 2021: Certificate in Advanced Excel and Finance for Non-Financial Professionals
- 2022: Certificate in Power BI, SQL, and Tableau
- 2023: Certificate in Data Analysis, Python for Data Science, and SQL Server Integration Services
- 2022 – Present: Final-year student in Public Accounting and Finance (4th and last year)
- 2024: Enrolled in Computer Engineering (currently in 2nd year), Microsoft Fabric Certification, and additional certifications in Project Management and Soft Skills
- 2025: Git and GitHub Certification, Microsoft Data Engineering Certification
